# INSTRUCTION

BY Z D O R M A N

to the moon

Red Volume Tsunami

Contact  
@Zdorman

Zdorman is in touch and this video is an instruction for installing the “to the moon” indicator. After you have purchased a subscription to the indicator, go to the indicators panel, enter the name and add it to your favorites by clicking on the asterisk.

The indicator settings should be set by default, there is no need to change anything. The timeframe I recommend is 15 minutes. There are signals on other halves, but at 15 minutes he showed the most successful trades.

@Zdorman

To set notifications without having a premium account on Tradingview, you need to create a list of quotes of the exchange on which you trade. In the upper-right corner above the list of coins, click on the Next create a new list checkmark. We name it as it suits you.

Contact  
@Zdorman

Now that the list has been created, we add coins coming from the exchange on which you trade, futures, spot, you don't have to add. Important! The list needs to be updated periodically, if new coins are listed on your exchange, you must manually add them to this list. check whether the list of coins corresponds to the exchange you are trading on. When you have added all the current coins and created your list, proceed to install notifications. It is important to keep in mind that you can only put a notification on 2 lists!

# NOTIFICATIONS

Click on the three indicator dots to create an alert. In the first "Tools" tab, select your existing list of coins, it will be displayed there with your name. Next, select the notification once per bar. This will help after the signal has come to prepare, to look at the situation, but in no case do not enter before the candle closes. There have been cases when there was a signal, but after the candle was closed, it did not gain a foothold and we no longer enter into such a situation. There was a sharp manipulation, which disappeared by the time the candle was closed.

On the clock panel, you can already see your created list with notifications. Now you have notifications set to 2 indicators.

The same rules apply to the "Red Volume Tsunami" indicator. However, an important caveat is that we recommend setting notifications for 5 minutes for this indicator! Do not enter before the candle closes, until the signal is fixed.

# THANK YOU

## R E C O M M E N D A T I O N S

I will fix my current list of coins on the Bybit exchange below, if you use this exchange, you can use it, and if you do not use it, I will leave my link to register on this exchange, I would appreciate it if you register. The most important thing is to remind you, do not ignore stoploss, do not enter into a deal more than you can afford, no more than 10-15% of your capital. Do not play with leverage, this is a direct path to liquidation. The leverage should be no more than 10x. After entering a trade, when the coin has started to move towards profit, set a stop at breakeven for yourself. Remember that there are transactions that can immediately fly away at a furious percentage, and there will be those who will go for a long-term correction. Do not neglect risk management! Catch whales and fly to profit 🚀
